Chuck:

enclosed please find the .30 learner mast that was included with my .46 Pro kit. This is the exchange for the mast you sent already. Also included is the start shaft bearing block. Not sure what kit this goes to, but the I.D. of the start shaft bearing is far too large for my .46. Per our conversation, please install the correct bearing and return to me at the address above.

Thanks for all your support. Having built Hirobo, Kyosho, JR and a few other kits, I feel the Quick line has outstanding fit and finish, and fly's better than anything else out there. And your customer support is far superior to anything else I have experienced in this hobby. I will continue to recommend your products to fellow modelers, and will remain, as always, a loyal customer of Hobbies and Heli's.

Sincerely,

Dave Wismer
